Orgone Accumulator Box - William Reich Handbook Summary

In the 1940s, an Austrian immigrant to the USA and refugee from Nazi Germany, Dr. [Wilhelm Reich](#) made the scientific discovery of a previously unknown energy existing within living organisms, in space, and in the atmosphere. Orgone energy as Dr. Reich discovered was synonymous with “life energy”, long postulated by scientists and accepted as fact by ordinary people around the world. Orgone energy could be gathered in its free form directly from the atmosphere using a device he later called “The [Orgone Accumulator](#) or Orgone Box”. This was a simple enclosure resembling a large hollow capacitor composed of alternating layers of special conductors and insulators.

The Orgone accumulator allowed a high charge of the Orgone to collect inside itself, facilitating its direct study revealing many of its properties. Dr. Reich observed that the [Orgone](#) energy in the human bio-system was expressed in sexuality and emotion and could be measured bio-electrically. A person’s overall aliveness and vitality was a function of atmospheric and human Orgone charge and pulsation and this could often be increased by sitting inside the Orgone box. Orgone charge of the tissues was a fundamental component of the immune system as revealed in the bioelectrical charging of red blood cells.

The [Orgone accumulator](#) was found to boost the immune system of people who sat inside them for periods of approximately 30 minutes a day over many days and to thereby promote health and reduce the symptoms of some diseases. So incredible were the healing effects of the Orgone that [Theodore Wolfe](#), an associate of Dr. Reich and a pioneer in psychosomatic medicine ca

accumulator “the most single discovery in the history of medicine, Bar None”. treatment of severe burns constitutes medical malpractice.

Dr. Reich observed the Orgone energy had a blue color, and he reasoned an envelope of blue glowing Orgone energy surrounded the Earth. He observed the streaming of protoplasm in cells and movements of smooth muscle tissue bore a resemblance and functional similarity to the movements of streaming cloud patterns and to the illuminating and animal like aurora phenomenon. Dr. Reich reasoned that both the galaxies and hurricanes were created and put into motion by superimposing streams of Orgone energy in a cosmic dance similar to the sexual attraction between male and female.

He demonstrated the existence of Orgone energy in deep vacuum tubes which also glowed blue when charged up inside Orgone accumulators. The Orgone energy in deep vacuum tubes which also glowed blue when charged up inside Orgone accumulators. The Orgone energy filled all space, he argued satisfying many of the descriptions of the older cosmological ether of space or what modern astronomy confusedly calls “Dark Matter”, which is identified as an anomalous blue glowing halo surrounding galaxies.

Even more controversial, Dr. Reich developed a method to run small motors with Orgone energy. He also developed Orgone energy devices for effecting the atmospheric Orgone and clouds to bring rain during droughts or even into large deserts. Dr. Reich demonstrated the same life energy or Orgone energy in several carefully controlled experiments. His publications on the subject of Orgone energy presented very positive results from his experimental work but this only added to the hysterical outrage of his critics who subjected Dr. Reich and his associates to slander and character assassination.

Reich’s Early Years

Wilhelm Reich was born in 1897 in Galicia, the easternmost part of the Austro-Hungarian Empire now the Ukraine. He grew up on a large farm operated by his father in Bukovina. German was his first language, and he was an Austrian citizen until 1938. According to The Bibliography of Orgonomy - prepared at Orgonon in 1953 under Reich’s supervision - his interest in natural science and biology was stimulated early by the life on the farm, close to breeding, cattle farming, and agriculture.

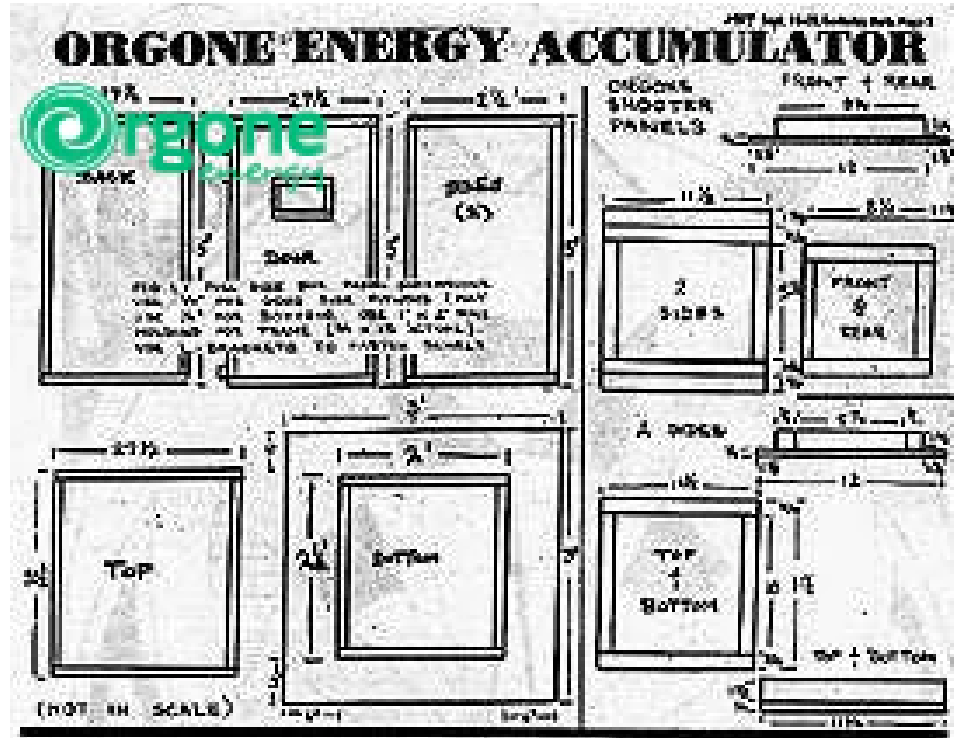

Between his eighth and twelfth years, he had his own breeding and collection laboratory of plants, insects, and butterflies under the guidance of a private tutor. The natural life function, including the sexual function was familiar to him as far back as he could remember, and this may well have determined his strong inclination later as a bio-psychiatrist toward the biological foundation of the emotional life of man and his biophysical discoveries in the fields of education, biology, and medicine.

Reich was educated at home by tutors until he was 13 years old. His mother to whom he was devoted committed suicide in 1910 after his father discovered she had had a brief affair with one of the tutors. His father died four years later from tuberculosis, leaving a 17-year-old Reich to direct the farm work on his own without interrupting his studies at the high school he was attending.

That same year, 1914, the First World War broke out. Within days, Russian troops swept through Bukovina. Reich narrowly escaped being sent to Russia as a hostage and had to flee his home. Later he wrote "I never saw either my homeland or my possessions again. Of a well-to-do past, nothing was left." With the next four years, Reich served in the Austrian army experiencing what he called the war as a machine. In 1918 the war finally ended, Germany and Austria were defeated the Austro-Hungarian Empire was broken up and Bukovina became part of Romania. Intellectually starved, homeless, and alone after four years of war, Reich entered the Medical School at the University of Vienna.

Reich, Freud, and the Libido

As a war veteran, Wilhelm Reich was allowed to complete the 6-year course in 4 years, and he passed the eighteen Rigorosa in eighteen subjects and received "ausgezeichnet" (excellent) in all pre-medical subjects. He graduated and received his degree in 1922. Reich did his post-graduate work in internal medicine during his last years of medical school. For another two years, he continued his postgraduate education in neuro-psychiatry.

As an undergraduate, his recognition of the significance of sexuality drew him to the work of Dr. Sigmund Freud the father of psychoanalysis. Psychoanalysis was a new discipline which had emerged from Freud's startling insights into the causes of mental illness. Soon he was considered one of Freud's most promising students. Reich began his private psychiatric and psychoanalytic practice in 1922. He was the first clinical assistant at Sigmund Freud's Psychoanalytic Polyclinic in Vienna from when it was established in 1922 to 1928. As a member of the faculty of the Psychoanalytic Institute in Vienna, he gave lectures on bio-psychiatric theory and clinical subjects.

Reich's extensive research and clinical work ultimately led to conflicts with Freud. Freud had discovered that neuroses are caused by the conflict between natural sexual instincts and the social denial and frustration of those instincts. Freud had also hypothesized the existence of a biological sexual energy in the body. He called it "libido", and described it as "something which is capable of discharge, displacement, decrease, and increase, and which extends itself over the memory trace electric charge over the surface of the body.

But as the years passed, Freud and his followers diluted much of this concept, reducing the libido to little more than a psychological energy or idea. By 1925, Freud had concluded that "the libido theory may therefore for the present be pursued only by the path of speculation"

Reich's clinical observations however demonstrated that sexual energy was more than just an idea and that sexual satisfaction in fact alleviated neurotic symptoms. He discovered that the function of the orgasm is to maintain an energy equilibrium by discharging excess biological energy that builds up naturally in the body. If that discharge function is disturbed - as it proved to be in all his patients - this energy continues to build up without adequate release, fueling and stagnating neurotic disorders. Also, Reich discovered that in psychic disturbances, this biological energy is bound up not only in symptoms, but more importantly, in the individual's muscular and characterological rigidities - what he called "armor".

Reich's orgasm theory set him apart from his colleagues, because it indicated that the libido was a real physical energy that possibly might be measured quantitatively. His clinical work also led to new therapeutic techniques designed to discover and eliminate any impediments to the flow and discharge of this energy. But the widespread existence of human misery forced Reich to conclude that the solution to the problem of neuroses was not treatment, it was prevention. "You have to revamp your whole way of thinking," Reich said, "so that you don't think from the standpoint of the state and the culture, but from the standpoint of what people need and what they suffer from. Then you arrange your social institutions accordingly."

Freud, on the other hand, maintained that culture takes precedence, that sexual instincts must be adapted to the existing social structure. These conflicting positions led to an eventual break between Reich and Freud. In Vienna and later in Berlin, Reich devoted much of his time and money educating working-class people about the essential role of sexuality in their lives. "I had six clinics in Vienna where people came and received advice once or twice a week.... To provide educational and medical help was its purpose."

To reach the greatest number of people, he worked within the communist and socialist parties to promote better housing, divorce rights, birth control, and sex education. Reich recalled that in Berlin there were about 50,000 people in my organization in the first year. Reich was also very r Germany's turbulent political climate. Unlike most members of the Berlin psychoanalyt Reich openly opposed the rise of the Nazi Party. But his activities exacted a high price; he

denounced by the communists and expelled from the International psychoanalytic Association. He called these events "catastrophes which threaten my personal, professional, and social existence" when asked what he would do Reich replied 'just go on'.

Bions, Bio-Electrical Experiments, and the Discovery of Orgone Energy

Reich traveled to Scandinavia where he managed to continue his research despite incessant bureaucratic interferences. In the University of Oslo, while continuing to develop and teach his innovative therapeutic techniques, Reich began a series of laboratory experiments to verify the existence of a physical, biological energy expressed in the emotions. Using human subjects, Reich could demonstrate a charge at the skin's surface directly related to feelings of anxiety and pleasure. The charge would increase when a subject experienced pleasure and decrease during feelings of unpleasurable.

From this, Reich concluded that pleasure is the movement of biological energy toward the periphery of the organism, while anxiety is the movement of this energy toward the center. He assumed this energy to be electrical but the results of these experiments indicated otherwise. For instance, the biological energy that Reich measured moved in a slow, wavelength fashion, in contrast to electromagnetic energy which moves much faster. Reich wondered if similar energy processes exist in more basic life-forms.

This led Reich to conduct laboratory experiments in which he used time-lapse motion picture equipment affixed to microscopes with over 3000x magnification to record the development of protozoa. During these experiments Reich discovered that under certain conditions, sterilized and unsterilized substances such as foodstuffs, charcoal, sand, blood, and grass - disintegrate into pulsating vesicles that exhibit a bluish color. He called these vesicles "bions," after the Greek word for life.

Reich observed internal motility in the bions, an effective energy. He also found that certain bions revealed a strong radiation phenomenon seen here as a white field around the organism and that these bions could kill bacteria and cancer cells. This radiation confirmed the existence of an energy that did not obey any known laws of magnetism or electricity. Reich called this energy "Orgone," because its discovery had evolved from his investigation of the orgasm function, and because this energy could charge organic matter. When he published his findings, the psychiatric and scientific communities responded with a vicious year-long attack in the Norwegian press.

In the wake of this response, and the inevitability of a second world war, Reich began to look to America as the future home for his work. In August 1939 Reich sailed for America on the last ship to leave Norway before World War II broke out.

Reich's First Years in America

Reich settled in the Forest Hills section of New York City, he taught at the New School for Social Research in Manhattan, published his books in English, trained American physicians in his therapeutic techniques, and pursued his investigations of Orgone energy. Since the energy appeared to be everywhere and to permeate all substances, Reich had to find ways to isolate and collect it to study its functions and make it usable. Where did Orgone energy come from?

The Orgone Energy Accumulator

To collect and isolate Orgone from bion culture, Reich relied on the results of several laboratory experiments. These experiments demonstrated that organic or nonmetallic materials such as plastic, wool, or cotton attract, absorb, and hold the energy. Metallic materials like iron or steel attract the energy and quickly reflected in both directions. Based on these experiments, Reich constructed small boxes with alternating layers of metallic and organic materials with the inner walls lined with metal. By looking through a specially designed lens inserted into a wall of each box, one could observe Orgone radiation from the bions within the enclosure.

These "Orgone energy accumulators or orgone boxes" also revealed an unexpected phenomenon: the appearance of Orgone radiation inside the enclosure even without the presence of bion cultures. Reich now faced the daunting possibility of having discovered a biological energy that seemed to be everywhere, while still pondering the perplexing question of where Orgone energy originated. In Maine, he would soon find the answers.

The Accumulators and Medical Orgone Therapy

Meanwhile, back in New York, the accumulator quickly became an increasingly vital tool for Reich's research. The accumulator's organic layers attracted the atmospheric Orgone energy which is then directed inward by the metal layers. Any energy reflected outward by the metal layers is reabsorbed by the organic material, attracted back to the metal, and directed toward the inside of the box. The result was a higher concentration of Orgone energy inside the box. The more layers, the higher the concentration.

This accumulation of energy can be verified in a variety of ways. For example, a constant temperature difference exists between the air above, the box, and in the surrounding air, contradicting the second law of thermodynamics. There also exists a slower electroscopic discharge rate in the higher Orgone concentration within the box. These layered boxes known as Orgone energy accumulators became a valuable tool in Reich's scientific and medical research. Initially, they were used to observe visual manifestations of Orgone energy within the enclosure and to test the effects of Orgone radiation on cancer mice. Because his results with cancer mice were so promising, Reich tested the effects of Orgone radiation on human subjects. He constructed Orgone energy accumulators that were large enough for a person to sit in, and in 1942, he began experimental treatments for cancer patients. They were all terminal cases, Reich promised no cure and charged no money.

Over a period of time, the patients showed marked improvement: healthier blood condition, weight gain, relief of pain, and the elimination and shrinkage of tumors. Despite these positive results, the patients died, reinforcing Reich's conviction that cancer is a bioenergetic shrinking following emotional resignation, and that the tumors themselves are not the disease but merely a local manifestation of a deeper systemic disorder. Once again, Reich's focus became prevention.

Orgonon – A permanent Home for Reich's Work

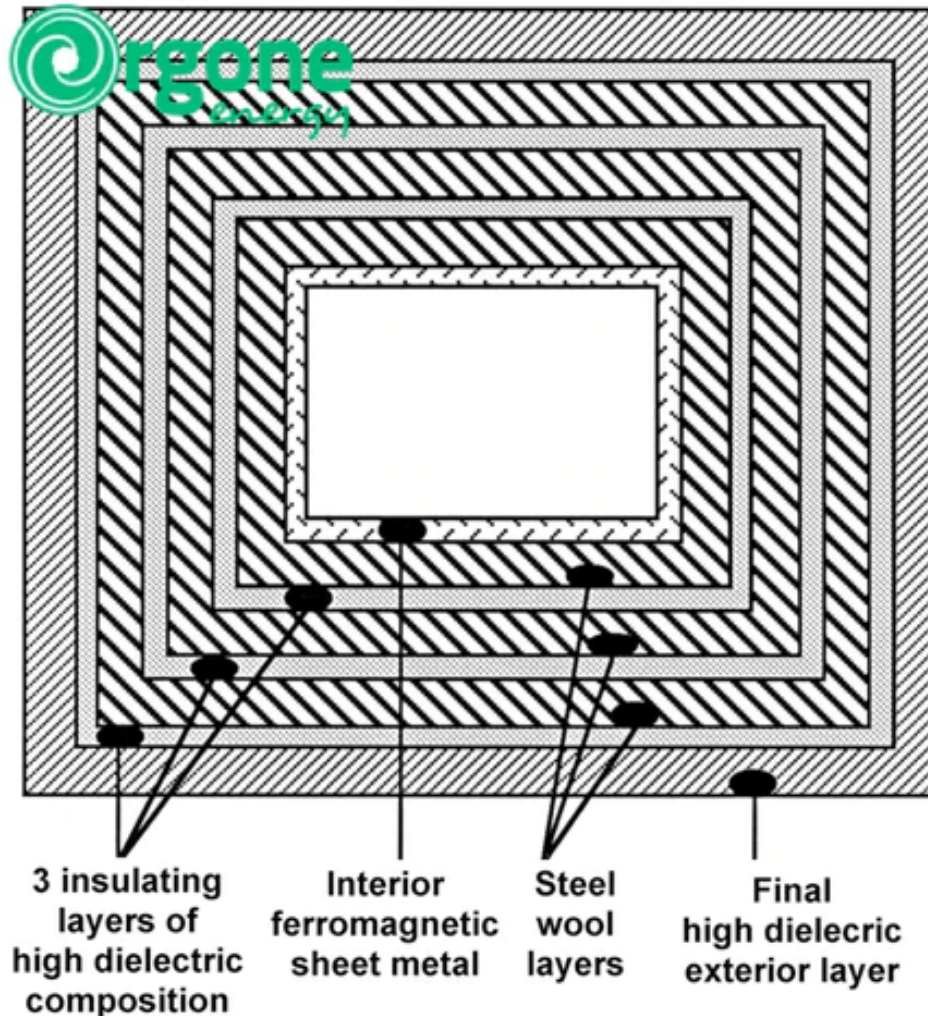

Reich also discovered that water and high humidity absorb and hold Orgone energy, making it difficult to carry out experimental work in New York City. During the summer in 1940 on a camping trip to New England, Reich discovered the Rangeley Lakes region in Maine. With its low humidity and clean air, it provided an ideal environment for his work. In 1942, Reich purchased an old farm bordering on a small lake. He called it Orgonon and envisioned it as a permanent home for the various branches of his work.

In 1945, a student's laboratory was built at Orgonon. Three years later, construction began on an Orgone Energy Observatory which included additional laboratory facilities, Reich's study and library, and outdoor observation decks to study and observe atmospheric Orgone energy phenomena. Funding for these buildings and for Reich's research came exclusively from his own income as a teacher and physician and from contributions and loans by students.

By 1947, after less than eight years in America, Reich's work was attracting considerable interest as Orgone research expanded into new areas of biophysics, medicine, and psychiatry. One of Reich's most significant new developments was the discovery of a motor force in Orgone energy that had enormous practical implications. With the development of Orgonon, Reich's dream of a home for slowly becoming a reality. Sadly, it was a dream that he would not see fulfilled.

Orgone Blanket

Reich invented the Orgone blanket, or blanket, to treat bedridden or too weak patients, who could not sit inside the Orgone accumulator (ORAC). The blanket was built according to the Orgone accumulator principle: alternating layers of organic material (sheep's wool) to inorganic material (steel wool). The blankets had been assembled with the 3 layers of a virgin sheep's wool and 2 steel layers, as a greater number of layers made the blanket too heavy and awkward to use. The patient could be completely wrapped or covered, except for the head, and could continue the treatment at home.

As reported by Buhl and Fischer, the blanket creates an energy field which is different from ORAC for two reasons: first, because head was not covered and remained outside the blanket and second due to the movement, even the slightest, of the fibers of steel wool. The blanket works as an accumulator where you should not spend a long time in (one hour is enough); it is not recommended to sleep under the blanket to avoid an overload of energy. According to Buhl, healthy people can use the blanket without side effects.

Penetrating moisture, which can create phenomena of rust on the steel wool would significantly lessen the effectiveness of the blanket. For this reason, it should always be thoroughly dried after use or exposed to the sun to facilitate the evaporation of moisture trapped deep inside. It should always be remembered that all Orgone devices work best in dry weather because the water (or moisture) in any form, reduces its effectiveness.

The Shooter Wand

The shooter wand is a very simple means for demonstrating the subjective sensations of the Orgone radiation, and also for irradiation of Orgone energy into body cavities. The completed shooter wand can be stored inside a well-maintained accumulator, and it can be removed for use when necessary. Under relaxed conditions, most people can hold this wand in the hand, or place it on the upper lip or solar plexus, and readily feel the soft radiant glow of the Orgone energy.

Human-Sized Accumulator

The human-sized accumulator is a 3-ply Orgone energy accumulator large enough to sit in and is composed of 6 large rectangular panels. Each panel is made from a wood frame, galvanized steel sheet metal, steel wool, fibreglass, celotex (soundboard). One side of each wood frame is faced with galvanized steel, the other with celotex, and the three alternating layers of steel wool and fibreglass are sandwiched in between.

Modern Analysis of Wilhelm Reich Findings

By 1947, after less than eight years in America, Reich's work was attracting considerable interest as Orgone research expanded into new areas of biophysics, medicine, and psychiatry. One of Reich's most significant new developments was the discovery of a motor force in Orgone energy that had enormous practical implications. With the development of Orgonon, Reich's dream of a home for his work was slowly becoming a reality. Sadly, it was a dream that he would not see fulfilled.

The FDA'S Campaign Against Reich

In 1947, an article written by a freelance journalist Mildred Brady appeared in New Republic magazine. It was filled with distortions and innuendos about Reich's sexual theories and Orgone research. Brady's most inflammatory claim was that Reich was building accumulators of Orgone energy "out to patients who presumably derived orgasmic potency from it." Implying that Reich w

the public, Brady challenged the medical authorities to take action against him. Two months later, the article was brought to the attention of the Federal Food and Drug Administration.

The result was a 10-year campaign by the FDA designed to destroy Reich's work. The FDA focused on the Orgone energy accumulator which Reich and other physicians were using experimentally with patients. Convinced that the accumulator was being fraudulently promoted as a sexual and medical device, FDA agents spent years interviewing Reich's students, physicians, patients, and associates. Looking for dissatisfied accumulator users none were ever found. As the FDA attack continued, so did Reich's work.

Reich and the Cloudbuster

Reich continued to develop new ways to harness, measure, and visualize Orgone energy from the atmosphere. The cloudbuster, for example, was an experimental instrument that could affect weather patterns by altering concentrations of Orgone energy in the atmosphere. It comprises a set of hollow metal pipes and cables inserted into water, creating a stronger Orgone energy system than that in the surrounding atmosphere. Water, which strongly attracts and absorbs Orgone draws the atmospheric energy through the pipes. Reich used this movement of Orgone from a lower to a higher energy system to create clouds and to dissipate them.

In 1953, during a long drought that threatened the Maine blueberry crop, several farmers offered to pay Reich if he could bring rain to the parched region. The weather bureau had forecast no rain for several days when Reich began his cloudbusting operations. 10 hours later, a light rain began to fall. Over the next few days, close to two inches fell. The blueberry crop was saved.

In February 1954, the FDA filed a complaint for an injunction against Reich in the Federal Court at Portland, Maine. The complaint declared that Orgone energy does not exist; it asked the court to prohibit the shipment of accumulators in interstate commerce and to ban Reich's published literature which they claimed was labeling for the accumulators. After considerable discussion and thought of this matter, Reich responded to the complaint with a lengthy letter to Judge John Clifford, explaining that he could not appear in court since doing so would allow a court of law to judge basic scientific research. He wrote:

"Scientific matters can only be clarified by prolonged, faithful bonafide observations in exchange of opinion, never by litigation... I therefore submit in the name of truth and jus.

not appear in court

Judge Clifford did not accept Reich's letter as a valid legal response and the injunction was issued on default as if Reich had never responded at all but the injunction was even more excessive than the initial complaint.

- It ordered that all Orgone energy accumulators and their parts were to be destroyed
- It ordered all materials containing instructions for the use of the accumulator to be destroyed
- As well, it also banned a list of Reich's books containing statements about Orgone energy until such time as all references to Orgone energy were deleted.

After the initial shock Reich, continued his work traveling to Arizona to experiment with the cloudbuster in the dry desert environment. While he was there, and without his knowledge one of Reich's students Dr. Michael Silvert moved a truckload of accumulators and books from Rangeley, Maine to New York City, a direct violation of the injunction. As a result, the FDA charged Reich and Silvert with criminal contempt of court. In 1956, both men were found guilty. Reich was sentenced to two years in a federal prison.

While Reich appealed his sentence, the government carried out the destruction of accumulators and literature. In New York City, several tons of Reich's books and other publications were burned in one of the city's garbage incinerators including titles that were only to have been banned. This destruction of literature constitutes one of the most heinous acts of censorship in United States history. All appeals denied on March 11th 1957, two weeks shy of his 60th birthday. Wilhelm Reich was imprisoned at the federal penitentiary in Lewisburg Pennsylvania. He died there of heart failure eight months later on November 3rd 1957 and was buried at Orgonon.

But the tragedy of Reich's death should not be allowed to overshadow the richness of his life, for while he lived he was truly alive. Luckily, most of Dr. Reich's books survived and were republished. Newly republished editions of his writings are available from internet bookstores and catalogues in many languages from all around the world. Since the 1960s, an entire new generation of physicians and scientists have investigated Dr. Reich's work, reproducing his experiments, applying the clinically and finding them to be sound and the discovery of the "Orgone energy" to be authentic.

The true power of Orgone energy discovered by Dr. Wilhelm Reich in the 1930s is still , and ignored to disbelievers and skepticism. Unfortunately, like the devices that cause dangerous

electromagnetic poisoning, doubt and cynicism are one of the plagues of our modern society and in themselves, a blockage of powerful life force, cosmic energy. Hopefully, our society can learn to appreciate and positively exploit this all-encompassing and influential source of positive energy.

FAQ

- Does Orgonite protect from 5g? Yes! Orgonite, when properly constructed can take stray electromagnetic fields in the environment and transform them into harmless beneficial fields. It does this by passively emitting beneficial negative ions into the environment. Simply, Orgonite is something you can have on your body and around you in the office, garden, and home to help protect you from the harmful microwaves coming from 5G. Our blend of Orgonite products have microwave blocking properties and transform these harmful fields into beneficial healing energy.
- Is Orgonite natural? Absolutely! An Orgonite is composed of metal shavings, catalyzed fiberglass resin, and a tiny bit of quartz, poured into molds. It functions as a self-driven, continuously operating, highly efficient energy transmutation device, drawing in negative life energy and transmuting it into positive energy. The resin in Orgonite shrinks during the curing process, permanently squeezing the quartz crystal inside which creates a well-known piezoelectric effect inside the crystal, meaning its end points become polarized electrically, this apparently causes it to function more effectively as a positive energy generator. These devices are built with easy to find materials. Orgonite is simply a mix (approximately 50/50 ratio) of resin and metal. It can be poured into all kinds of shapes: pendants, cylinders, disks, cones, pyramids, and more.
- Can Orgonite be harmful? Yes! Orgonite releases positive energy which can be harmful to humans. This is why we at Orgone Energy have developed Orgonium as an alternative which, instead of adding to the intensity of electromagnetic radiation, produces negative energy and ions to counteract the positive ions present in the air. This produces a 'balancing' or 'grounding' effect.
- Does Orgonite protect from EMF? Absolutely! Orgonite can reduce the effects of EMF radiation by neutralizing positive ions, turning them into negative ions. Contrary to popular belief, negative ions are beneficial for health and are found in nature. Moreover, they positively impact your mood, wellbeing, nervous system, and overall health. Orgonites vibrates at an intense level, boosting your aura, and protecting you from damaging EMF, negativity, and stress.
- What are Orgone devices? Orgone devices are etheric healing transistors/capacitors that adopted Reich's layering of organic/inorganic elements in his Orgone accumulator, but quartz crystals like gems and crystals are added to the mix. These devices produce an effect on the etheric level that transmutes the accumulated negative, stagnant Deadly Orgone Energy (DOR) energy into positive life force (Orgone) energy.
- Does Orgonite need to be charged? Absolutely! To function efficiently Orgonite itself doesn't require charging, but you can charge the crystals inside the matrix. When the weather is sur
Orgonite in the sun, where it will charge. It may not be in direct sunlight, as prolong

direct sunlight may fade transparent Orgonite healing stones such as citrine, rose quartz, and amethyst.

- Orgone energy, what it is? Orgone energy is another name for the multi-named etheric energy that is everywhere and embodies all things - Reiki energy, Prana, biomagnetic energy, Qi, and life force energy are all Orgone energy. The origin of Orgone energy goes all the way back to Wilhelm Reich who was a student under Freud. It was an extrapolation on the Freudian concept of the libido. He basically thought that the libido essentially was a physical manifestation of energy that could be harnessed and measured. He viewed it as a life-affirming force.
- How Does Orgone Energy Work? When Orgone is within range of a source of DOR/negative energy, it will efficiently and continuously transform it into POR/positive energy as it is being transmitted, which essentially creates positive energy transmitters out of all emitters of harmful negative energy, which are totally defenseless against the effect. The resin in Orgonite shrinks during the curing process, permanently squeezing the quartz crystal inside which creates a well-known piezoelectric effect inside the crystal, meaning its end-points become polarized electrically. It is believed this is also what causes the Orgone to function so effectively as a positive energy generator.
- What are the benefits of Orgonite? The effects of Orgonite differ from person to person. Some feel the energy right away (usually as a tingling or clarity-giving sensation), while for others the effects are cumulative. The most commonly reported effects of Orgonite are better sleep and vivid dreams; improved mental clarity, clear brain waves, and a sense of well-being; accelerated and healthier plant growth; supports faster wound healing; and calming effects on animals.
- What chakra is shungite? Shungite is a powerful stone to neutralize and balance the root chakra which is located at the base of the spine. It has the ability, due to shungite metaphysical properties, to affect the bio energy of the body and its chakra. Shungite shields you from all negative energy of the outer world creating a favorable environment for Muladhara activation and further spiritual development.
- Who Invented Orgone? Orgone was invented by Wilhelm Reich in the 1930s. He was an Austrian scientist, psychoanalyst, and psychiatrist.
- What do you need to make Orgonite? To make a functional Orgonite, you need a mix of about 50% resin (epoxy, urethane, or polyester), 50% metal shavings (steel, iron, copper, aluminum) and add a small bit of white/grey/transparent quartz in the mix.
- What is Black Tourmaline Stone Good For? Black Tourmaline Stone is a powerful stone for protection against negative energy of all kinds including EMF protection and psychic protection. It is also a strong spiritual grounding stone. Also known as Schorl, it encourages optimistic attitudes as well as happiness and good luck, regardless of the circumstances you find yourself in.
- How long does Orgonite last? Polyester resin has a long lifespan, usually above 50 years. If Orgonites are kept inside, they can easily last many hundred years. With time, over a couple of years, polyester resin has a slight tendency to change color, but it's almost imperceptible. This effect is similar for epoxy resins which become slightly browner over the years. However, ev

in salt water, an Orgonite made of polyester will surely last longer than 50 years while slowly breaking down around the edges, but it will often become whitish in a couple of weeks.

- How do you use shungite for healing? Use the shungite metaphysical properties in an elixir in your water to add fresh from the spring taste to home. The antioxidants present in shungite water are powerful influencers on your health and a fully functioning immune system. Try enhancing your workout by replenishing yourself with the shungite benefits afterward. The anti-inflammatory aspect of these antioxidants is great for those aching muscles. Even more stunning than its cleansing properties in water are shungite's protective qualities. As a conductor of electricity, shungite is known to aid in the inhibiting of electromagnetic fields or EMF's that result from electromagnetic radiation. Placing a shungite sphere at the base of a microwave, computer or around your various home electronic devices will not interfere with their operations, but it will block out some of their free radical output.
- What do Orgonite tower busters do? Orgonite tower busters are good to transmute the electromagnetic pollution of electronic/electric appliances for example. They are also ideal to place around in nature, in a vegetable garden or just in a garden, outdoors, indoors, in an office, in the car, etc. These Orgonites are great to place near big antenna masts (radio, mobile phones, TV, etc.), because that is where they shine and work at full capacity, or for large electric transformer stations or other big places that involve a lot of electricity or/and wireless transmissions.
- What is EMF and how does it affect you? EMF (Electric and Magnetic Fields) are invisible areas of energy, often referred to as radiation, that are associated with the use of electrical power and various forms of natural and man-made lighting. According to WHO, EMFs are possibly carcinogenic to humans and another study found that people exposed to high levels of EMF for years at a time showed an increased risk of a certain type of leukemia in adults. Also, a review of over two dozen studies on low-frequency EMFs suggests this energy fields may cause various psychiatric and neurological problems in people.
